

InventoryManager Up-to-date product listing online

Offer a complete product listing on your web site with ACM Media's InventoryManager. Store, edit and track your products using this online database system, and then allow your customers to view and search through your most up-to-date product listing online. InventoryManager can be customized for your business, is easy to use, and adds significant functionality to your web site.

What is InventoryManager?

- InventoryManager is an online database system for storing, editing and tracking product information.
- It creates a concise listing of your products for display on your web site. Your visitors can obtain details of each product. They can also search for a particular product by its name, type or other pre-determined properties.
- It is web-based application that allows for easy data entry and updates to the listing.
- It can be customized for your particular business and/or the nature of your products. It can also maintain your logo and branding.

Benefits of InventoryManager

Flexibility.

InventoryManager can be customized to gather the appropriate information based on your business and/or products.

Ease of use.

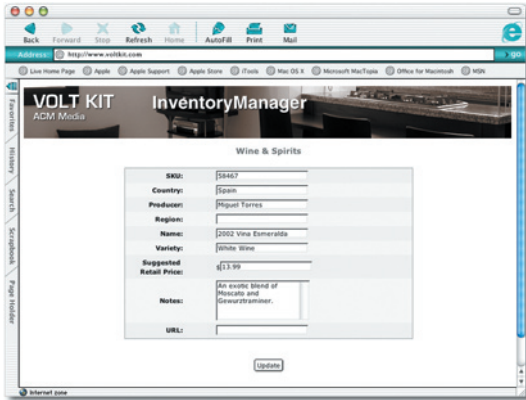

InventoryManager gives you the capability to add dynamic content to your web site.

Affordability.

InventoryManager requires low up-front cost and can be rapidly deployed.

Adds value to your web site.

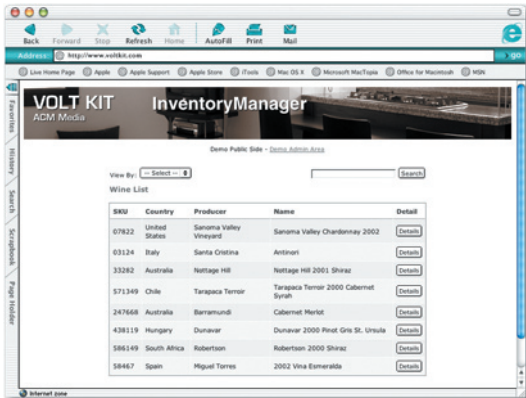

InventoryManager allows you to improve your business communication through your web site.

Update product information conveniently

How Does InventoryManager Work?

1. Login to InventoryManager via any web-enabled computer using your secure password.
2. Add a new product to the listing. Enter the product's information into your custom data entry form.
3. Edit or remove a product from the listing.
4. Confirm the changes. Logout of InventoryManager. The updated listing is now available on your web site.
