

## PropertyManager Real-time unit availability listing on the web

List real-time unit availability information online with ACM Media's PropertyManager. This web-based application is a practical solution for landlords and brokers to maintain accurate information on their web sites and receive applications for their for-lease or for-rent properties via the Internet. Use PropertyManager to turn your web site into a useful resource and an effective marketing tool.

### What is PropertyManager?

- PropertyManager is an online database system for entering and updating property listings for the web.
- It is accessed via the Internet and offers an easy-to-use, intuitive interface for its users.
- It creates a complete and concise listing of your properties' unit availability information for display online. Your visitors can choose to view details of each unit, obtain contact information and apply for the unit online.
- It allows you to conveniently provide real-time unit availability information on your web site with minimal investment in time and cost.
- It integrates seamlessly into your web site by maintaining your logo and branding.

### Benefits of PropertyManager

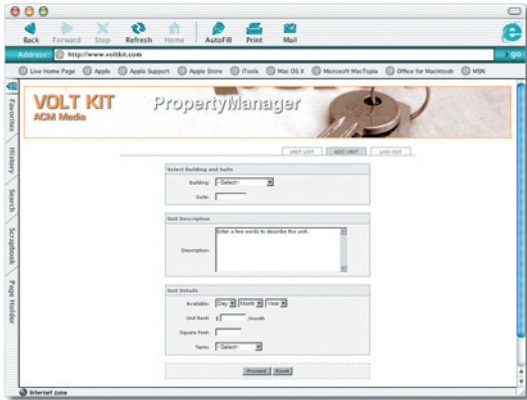

Provides real time unit availability information.

Ease of use and affordability.

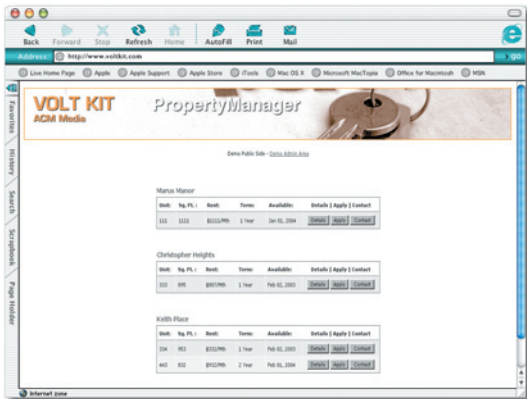

Accessible anytime, anywhere.

Enables you to reach and respond to more people.

Adds value to your web site.

Add a new unit to the online listing

Offer real-time unit availability listing on your web site

## How Does PropertyManager Work?

1. Create a secure account. Login to PropertyManager from any web-enabled computer using your secure password.
2. View the current unit availability listing. Review or edit details of each unit or remove a unit from the listing.
3. Add a new unit to the listing. Enter the property information, unit description and unit details. Specify the unit's available date, rent, size and lease/rent term.
4. Confirm the changes. Logout of PropertyManager. The updated listing is now available online for public access.
